Construction and support structure made of hot-dip galvanized steel.

Jump mat: made of polyamide lamellas, threaded on a stainless steel cord coated with a PVC sheath, attached to springs, which are attached to the rods inside the construction. The edges of the jump mat are covered with a 40 mm thick EPDM / SBR rim, with a polyurethane-based adhesive glued to the frame.

Installation instructions

Make a 40 cm deep earth OR concrete hole. The opening should be larger than the dimensions of the trampoline by 30-40 mm per side. Before inserting the trampoline, level the ground.

Number of users per 1 trampoline: 1
User age: from 3 years upwards
Freefall: max 90 cm

Trampoline made in accordance with PN EN1176-1
